                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. resuments of the S. resuments
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               streptococcus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members or (b) isolating
                                                                                                                                                                                                                                                                                                            Cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; gene therapy; cancer; immune disorder; cardiovascular disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                              cardiant; gene therapy; cancer; immune disorder; cardiova neurological disease; infection; human; secreted protein;

Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

Example 2 IJ ö 3194; 781pp + Sequence Listing; English

for preventing, protein or gene The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human

          and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis and limb regeneration; stimulates neuronal growth; can treat and prevent neuronal damage occurring in certain disorders or neurodegenerative conditions, such as, Alzheimer's disease, Parkinson's disease, and AIDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to subcurn by stimulating keratinocyte growth; prevents hair loss, since FGF family members activate hair-forming cells and promotes melanocyte growth; stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains organs before transplantation or for supporting cell culture of primary tissues; induces tissue of mesodernal origin to differentiate in early
                                                                                                                                                                                                                                                                                     The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and ather associated with conditions such as thrombosis, arteriosclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Isolated nucleic acid molecules associated polypeptides, useful

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC embryonic stem cells, besides, haematopoietic lineage; modulates
CC mammalian characteristics, such as, body height, weight, hair colour, eye
CC colour, skin, percentage of adipose tissue, pigmentation, size, and shape
CC (e.g., cosmetic surgery); modulates mammalian metabolism; changes
CC mammal's metal state or physical state by influencing biorhythms,
CC caricadic rhythms, depression, tendency for violence, tolerance for pain,
CC reproductive capabilities, hormonal or endocrine levels, appetite,
CC libido, memory, or stress; increases or decreases storage capabilities,
CC fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors
CC or other nutritional components. This sequence encodes a novel human
CC musculoskeletal system antigen.
CC Note: The sequence data for this patent did not form part of the
CC printed specification, but was obtained in electronic format directly
CC from the US patent office at
CC fitp.seqdata.uspto.gov/sequence.html?DocID=20020147140.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention relates to novel genes (AAL34669-AAL37666) and proteins CC (ABB03087-ABB04109) associated with the musculoskeletal system useful CC for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human CC tissues disclosed in the specification. The nucleic acids, proteins, cc antibodies and (ant)agonists are useful in the diagnosis, treatment CC antribodies and (ant)agonists are useful in the diagnosis, treatment CC and prevention of: (a) cancer, e.g. breast and ovarian cancer and CC other cancers of the adrenal gland, bone, bone marrow, breast, CC gastrointestinal tract, liver, lung, or urogenital; (b) immune CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, CC (c) cardiovascular disorders such as myocardial ischaemias; (d) wound CC healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as wyocardial ischaemias; (d) wound CC parasitic infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              08.NOV-2000

cancer

CC conditions, such as, Alkheimer's disease, Parkinson's disease, and CC conditions, such as, Alkheimer's disease, Parkinson's disease, and CC used to enhance bone and periodontal regeneration and aid in tissue CC transports or bone grafts; prevents skin aging due to sunburn by CC stimulating keratinocyte growth; prevents hair loss, since FGF family CC stimulates growth and differentiation of hematopoietic cells and bone CC organs before transplantation or for supporting cell culture of primary CC embryos; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates growth; cells used body height, weight, weight, weight, weight, hair colour, eye CC colour, skin, percentage of adipose tissue, pigmentation, size, and shape CC (e.g., cosmetic surgery); modulates mammalian characteristics, such as, body height, weight, hair colour, eye CC (e.g., cosmetic surgery); modulates mammalian metabolism; changes CC mammal's metal state or physical state by influencing biorhythms, creptoductive capabilities, hormonal or endocrine levels, appetite, CC reproductive capabilities, hormonal or endocranes storage capabilities, cofactors CC fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors CC mincrollekeletal existem antigen. The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers, stimulates angiogenesis and limb regeneration; stimulates neuronal growth; can treat and prevent neuronal damage occurring in certain disorders or neurodegenerative conditions. musculoskeletal system antigen.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIG176-ABL30511), expressed DNA sequences (ABLIG175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid genes from Drosophila and

RESULT 42
                                                                                                                                                                                                                 in which the corresponding protein is preferentially expressed. The transporter proteins isolated from humans and their human/mammalian orthologues serve as targets for identifying agents for use in mammalian therapeutic applications, and biological assays related to transporter proteins that are related to members of the GABA neurotransmitter transporter subfamily. The proteins and peptides also provide a target for diagnosing a disease or predisposition to disease mediated by the peptide, and are useful for treating a disorder characterised by absence of, inappropriate, unwanted or altered expression of the protein. The antibodies are also useful for assessing normal and aberrant subcellular
                                                        localisation of cells in various tissues in an organism, in pharmacogenomic analysis, for tissue typing and for inhibiting protein function. (II) is useful for constructing recombinant vectors, host cells and transgenic animals; for designing ribozymes; in drug screening; in diagnostic assays for qualitative changes in gene expression, particularly in qualitative changes that lead to pathology; in gene therapy; and to detect mutations in genes encoding transporters. This sequence encodes a novel human aminobutyric acid (GABA) transporter
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel human transporter protein, related to gamma-aminobutyric acid neurotransmitter transporter subfamily useful as model for developing human therapeutic targets and serves as target for human therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                           development of human therapeutic agents that modulate transporter activity. (I) is used to raise antibodies or to elicit another immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, and as markers for tissues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          is related to the gamma-aminobutyric acid (GABA) neurotransmitter transporter subfamily. (1) and the nucleic acid encoding it (1) can be used as models for the development of human therapeutic targets, aid in the identification of therapeutic proteins and serve as targets for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-102517/09.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-MAR-2001; 2001US-0818656
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       03-OCT-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Homo sapiens

                     CC GC, where differential expression of Gs is indicative of GCA.

CC Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in Gs; (2) screening (M3) CC for an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression in a sample of the tissue of gene(s) from Gs, where CC the level of expression of the gene is indicative of inflammation, (M5) an inflammation (especially chronic) or in a tissue, CC an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having CC inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. M1 is useful for detecting GCA, M2 is useful for CC modulating GA; M3 is useful for screening an agent capable of modulating CC detecting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject on a pathogen or sterile inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject on spathogen or sterile inflammatory disease (a capacially chronic) in a tissue, an allergic inflammatory disease (a capacially chronic) and pathogen or sterile inflammatory disease (a capacially chronic) in a tissue, an allergic inflammatory disease (a capacially chronic) in a pathogen or sterile inflammatory disease (a capacially chronic) in a tissue, an allergic inflammatory disease (a capacially chronic) in a tissue, an allergic inflammatory disease (a capacially chronic) in a tissue or sterile inflammatory disease (a capacially chronic) in a tissue or sterile inflammatory di
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to detecting (M1) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identif

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
patient, which comprise detecting the level of expression in a tissue sample of two or more genes selected from those shown in ABT09867-ABT11112, where a differential expression of the genes indicates breast cancer. The methods are useful in diagnosing, treating, detecting the progression, and in monitoring treatment of breast cancer in patients. The methods are also useful as a screening tool for agents that modulate the onset or progression of breast cancer. The breast cancer genes may be used as diagnostic markers for the prediction or identification of the malignant state of breast tissue, for confirming the type and progression of cancer, and for drug screening and assays. The present sequence is a coding sequence of the invention.

Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis periodontal disease; also bacterial infection, viral infection parasitic infection, protozoal infection, fungal infection and useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granuloc Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Diagnosing breast cancer in a patient comprises detecting the level of gene expression in cell or tissue samples, where a differential gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2002-674803/72.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Orr MS,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               25-JAN-2001; 2001US-263757P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ន្តន្តន្ត
                                                            The invention relates to a novel isolated peptide comprising or CC consisting of an amino acid sequence selected from an amino acid sequence cof a variant oestrogen receptor protein (e.g. ERbeta), or a fragment of CC 10 amino acids), antibodies against them, nucleic acids encoding CC them (including vectors for transforming calls). The gene for human CC ERbeta is located on chromosome 6q.25.1. The variant peptides and CC proteins can be used in assays to determine the biological CC cactivity of the protein, to raise antibodies, as a reagent in assays CC designed to quantitatively determine levels of the protein in CC collogical fluids, to identify compounds that modulate receptor CC activity and to screen compounds for the ability to stimulate or CC inhibit interacts with the receptor protein and a target molecule CC that normally interacts with the receptor protein, e.g. oestrogen. CC that normally interacts with the receptor protein, to assess expression in CC disease states e.g. cardiovascular disease and autoimmune disease (e.g. Cartenorous).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
